Modelling fish dispersal and settlement in the Mediterranean Sea

*Consequences for Hjort's aberrant drift hypothesis,
and connectivity among MPAs*

L'EXPLORATION DE LA MER

RAPPORTS ET PROCÈS-VERBAUX

VOLUME XX

FLUCTUATIONS IN THE GREAT
FISHERIES OF NORTHERN EUROPE

VIEWED IN THE LIGHT OF BIOLOGICAL RESEARCH

BY

JOHAN HJORT

WITH 3 PLATES

Fig. 16. Composition in point of age of spring herring, 1908-1913.
 4 = 4 years old (scales showing 4 winter rings).

Why study fish larvae?

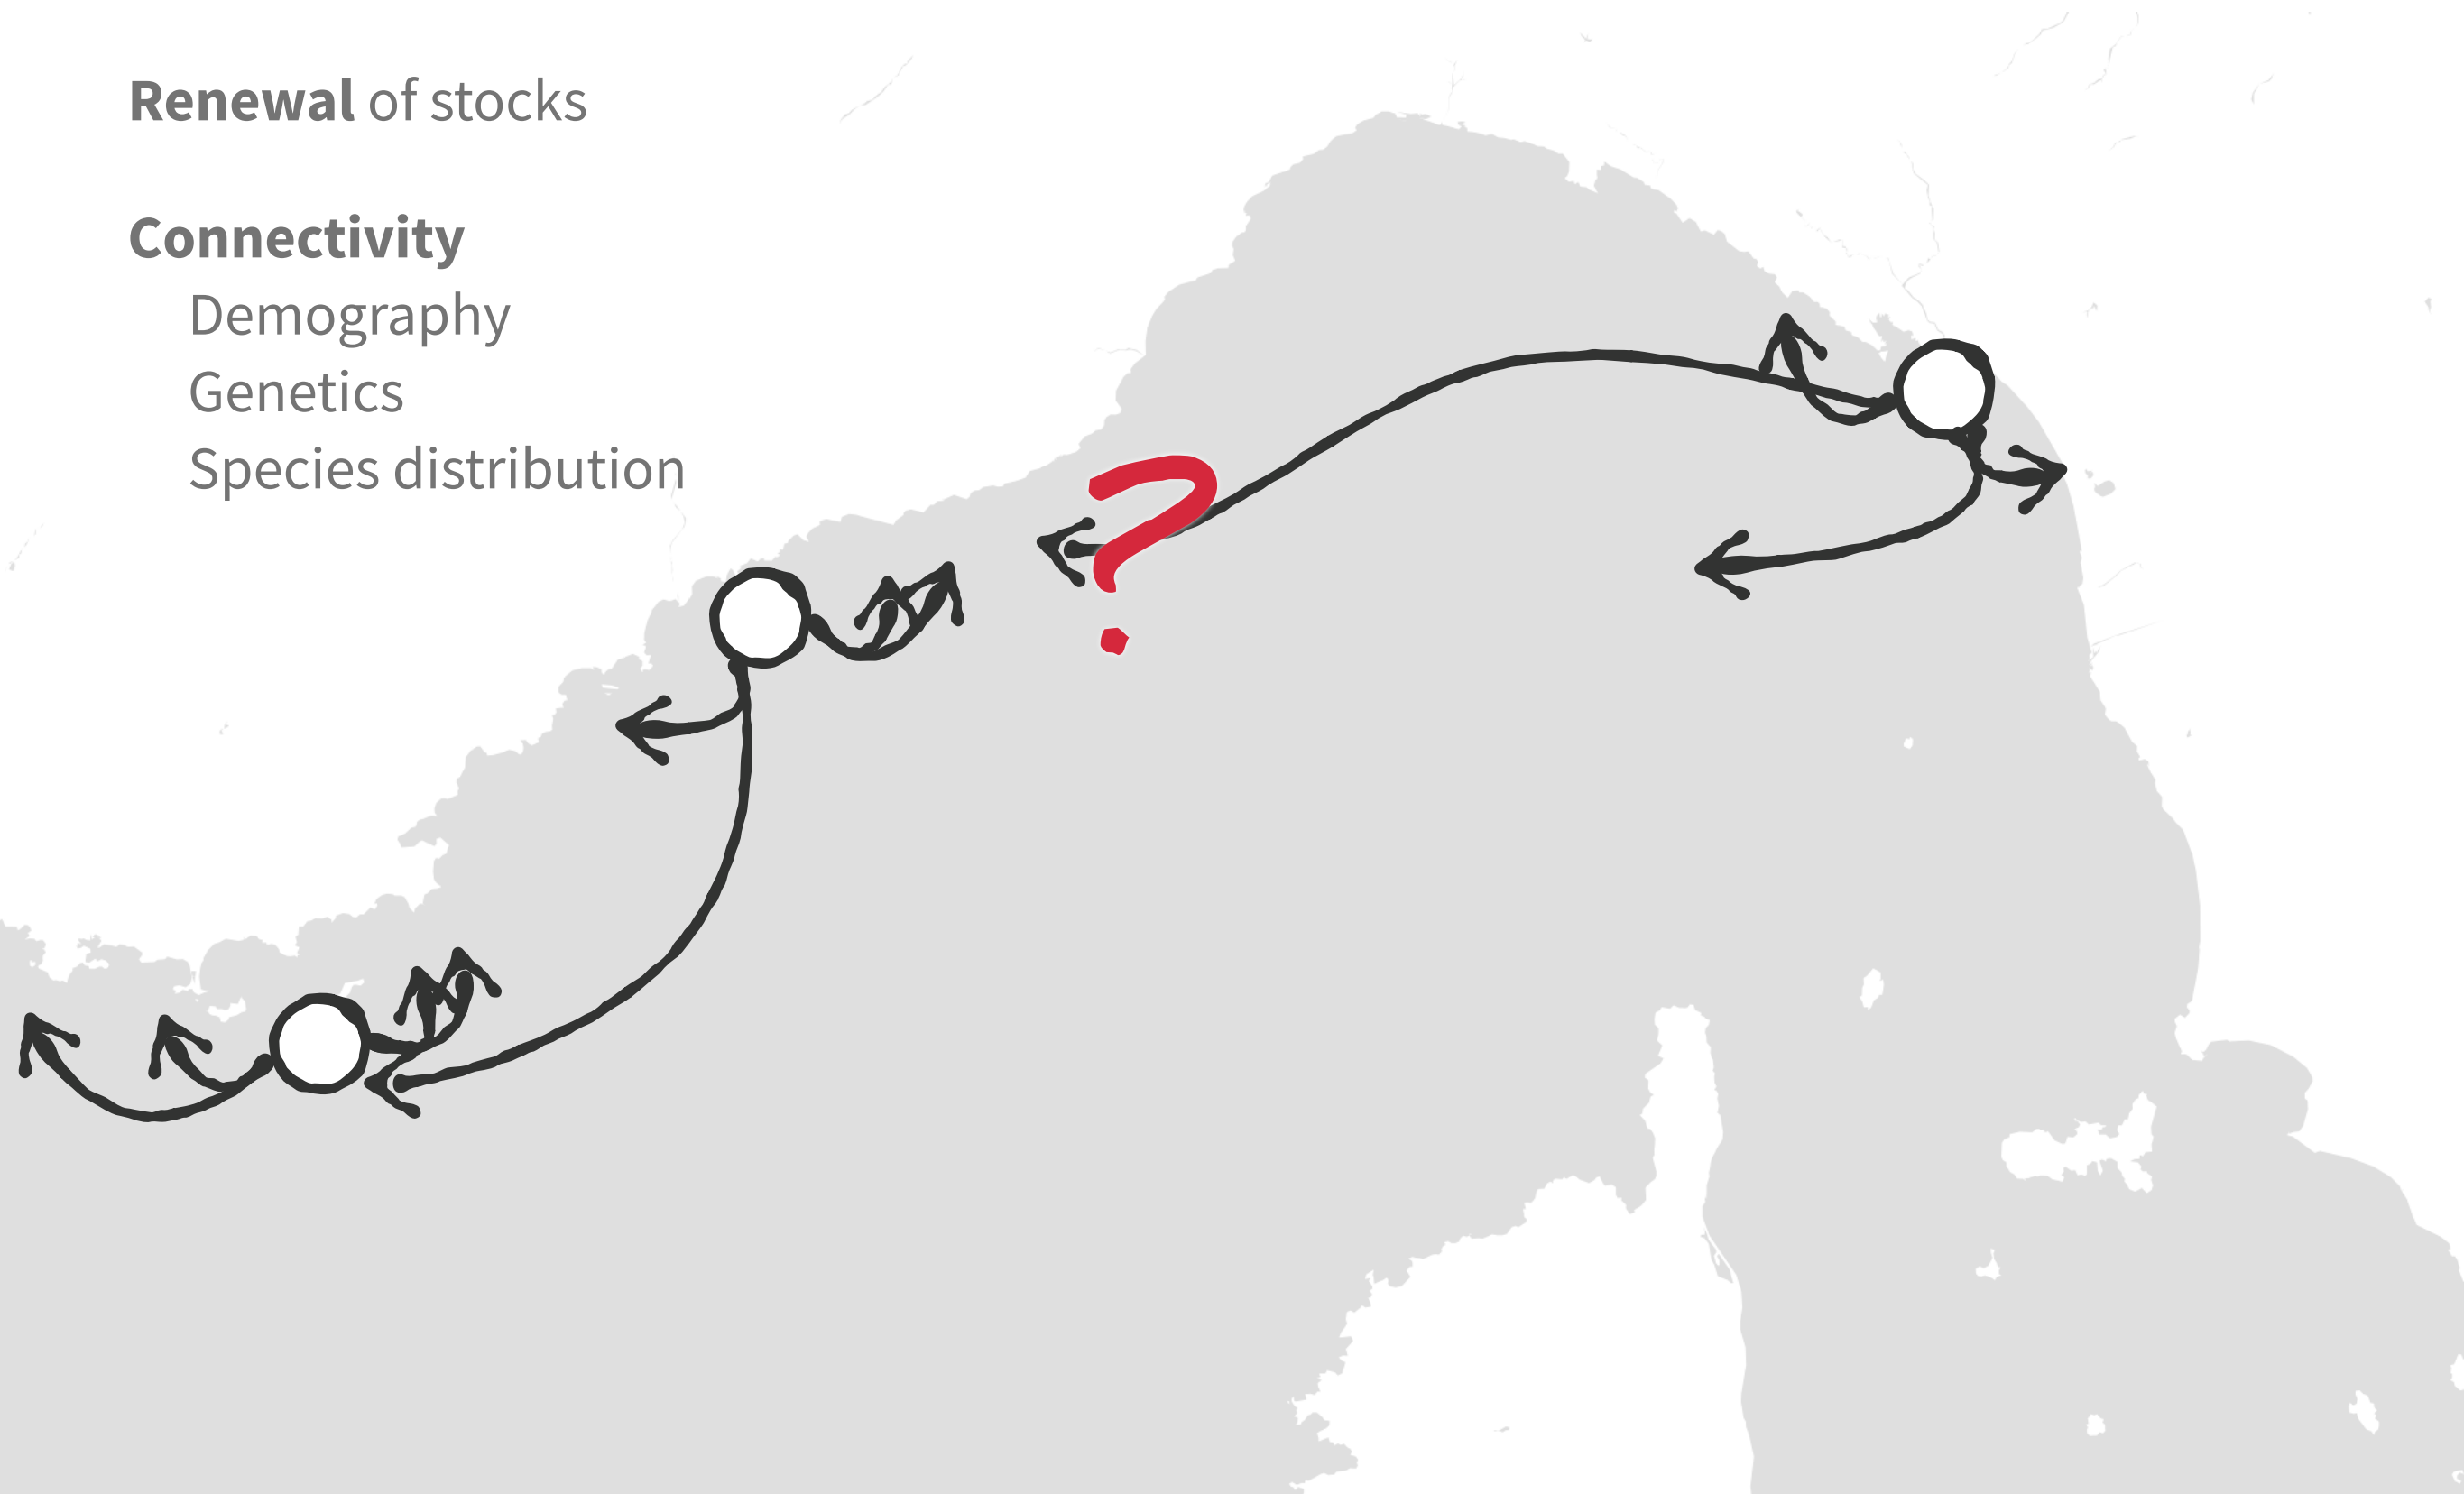

Renewal of stocks

Connectivity

Demography

Genetics

Species distribution

Sarpa salpa

Swimming speed measurement

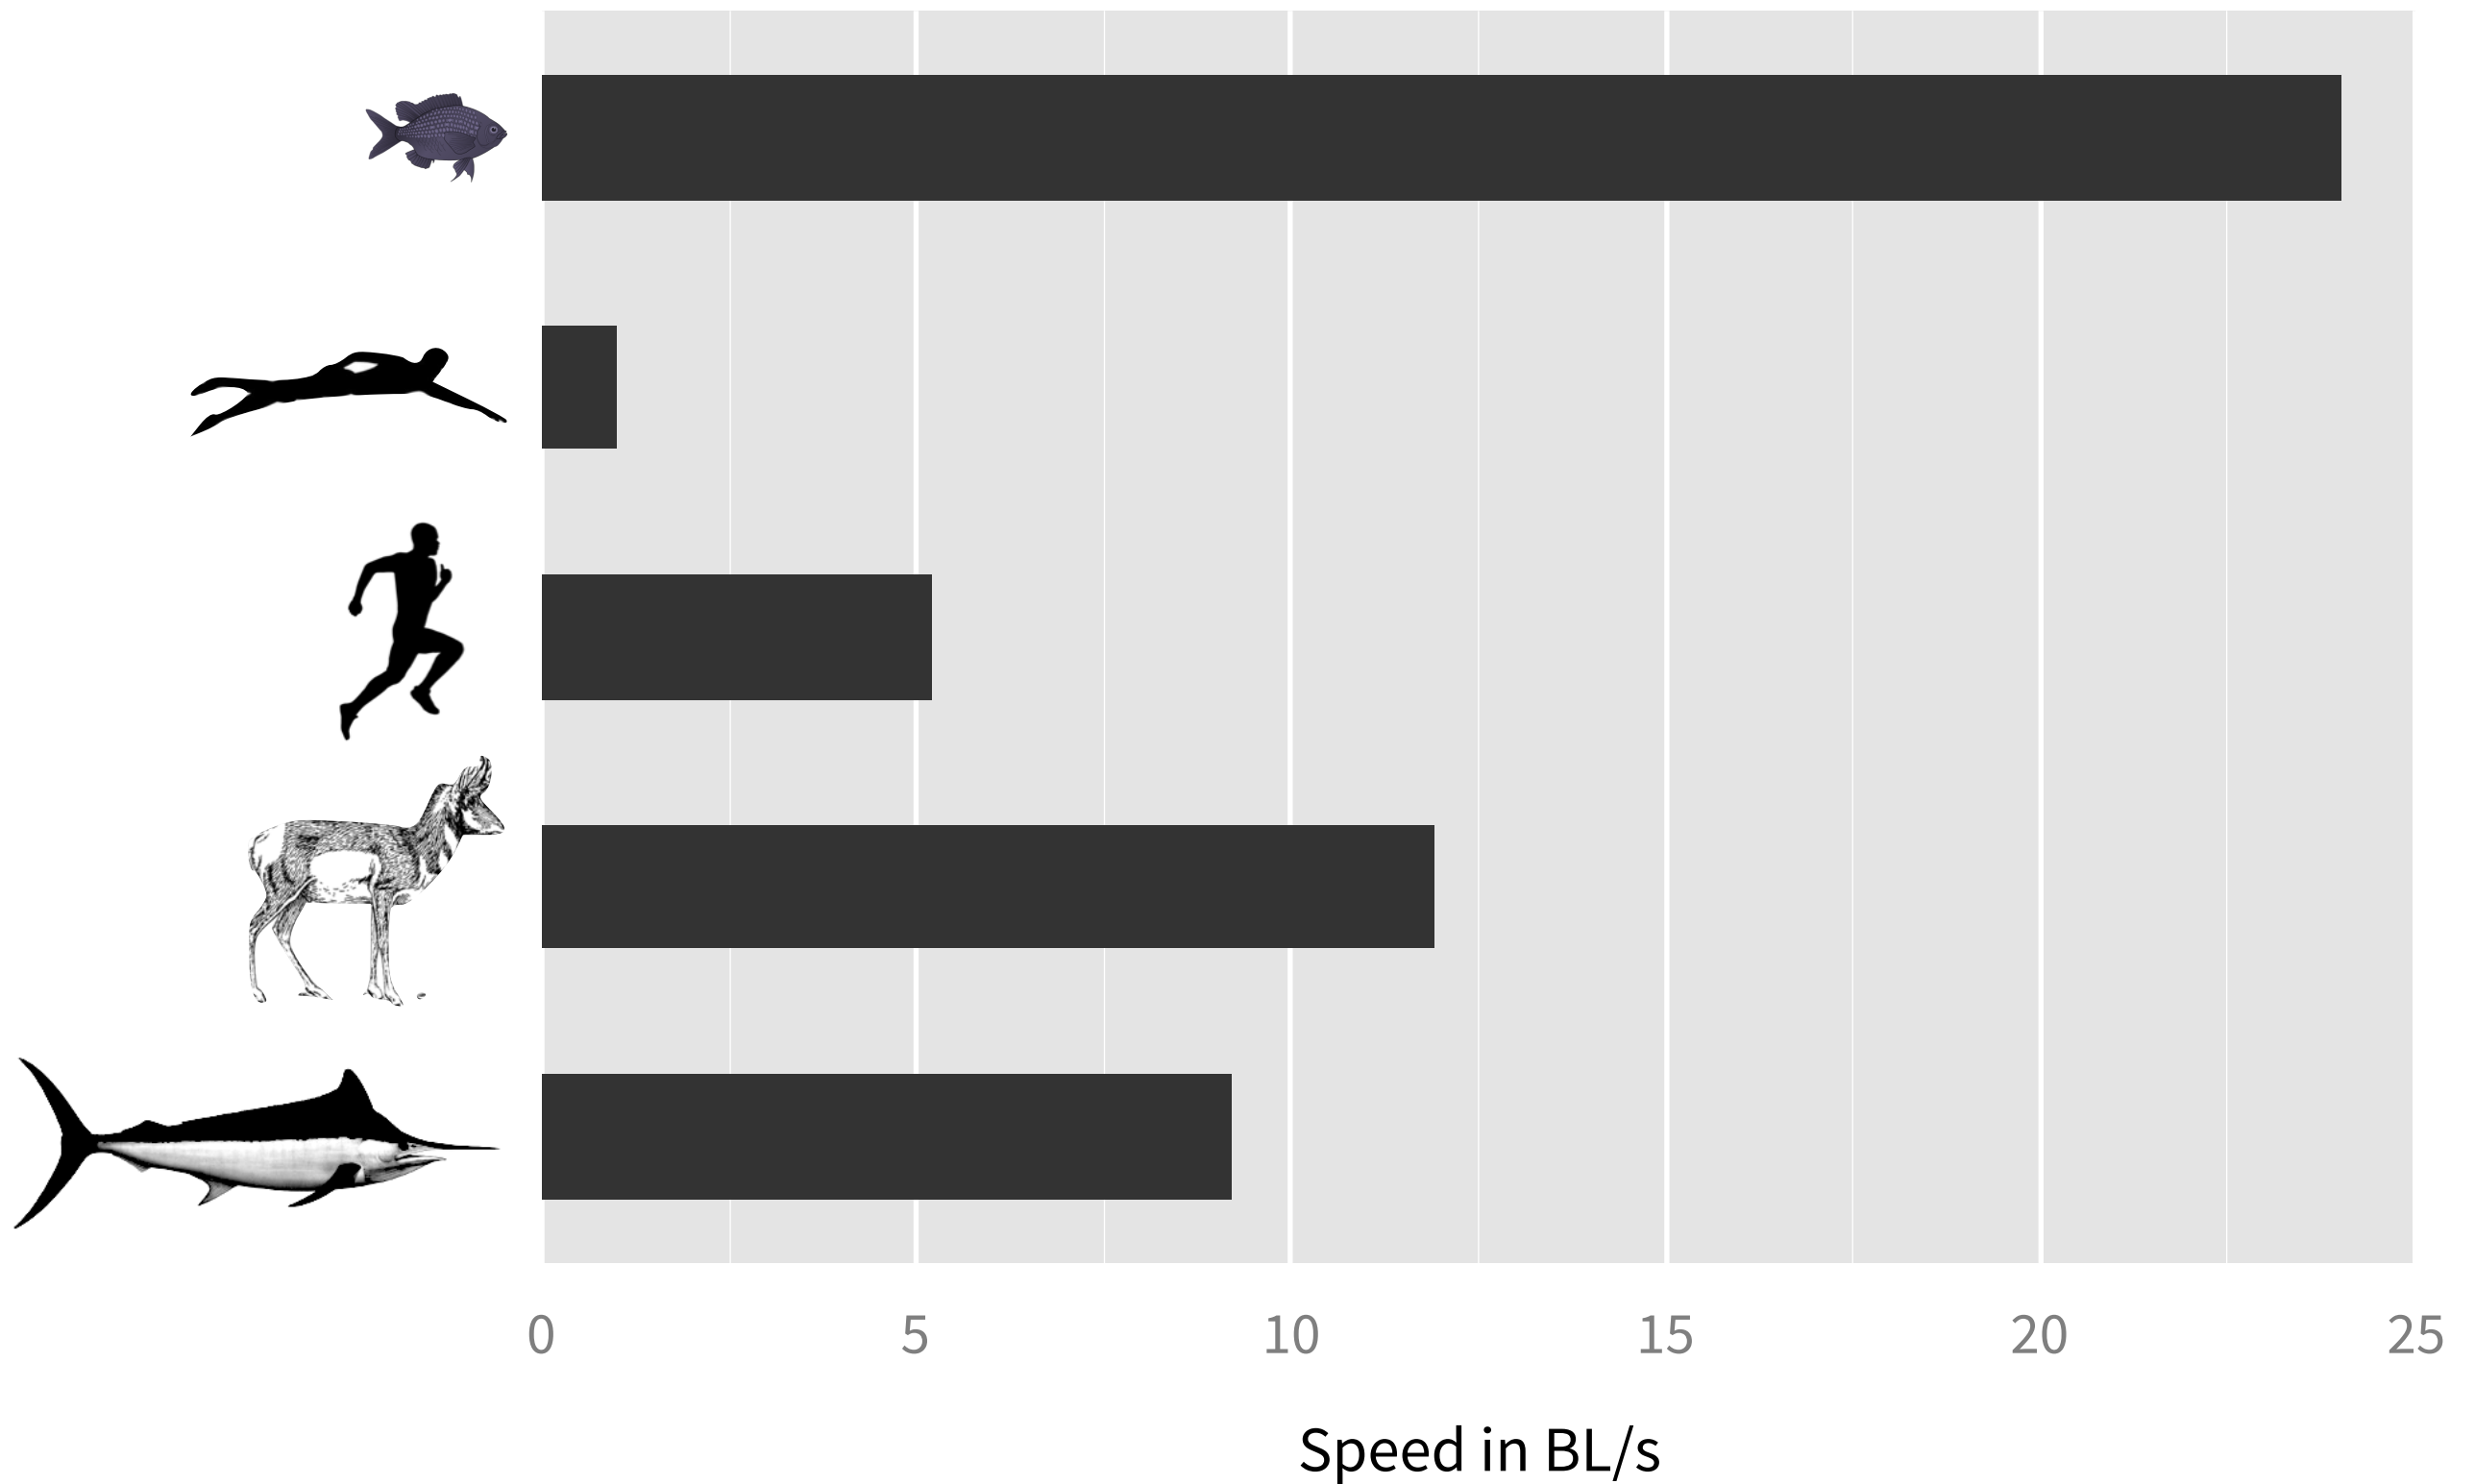

Mugilidae

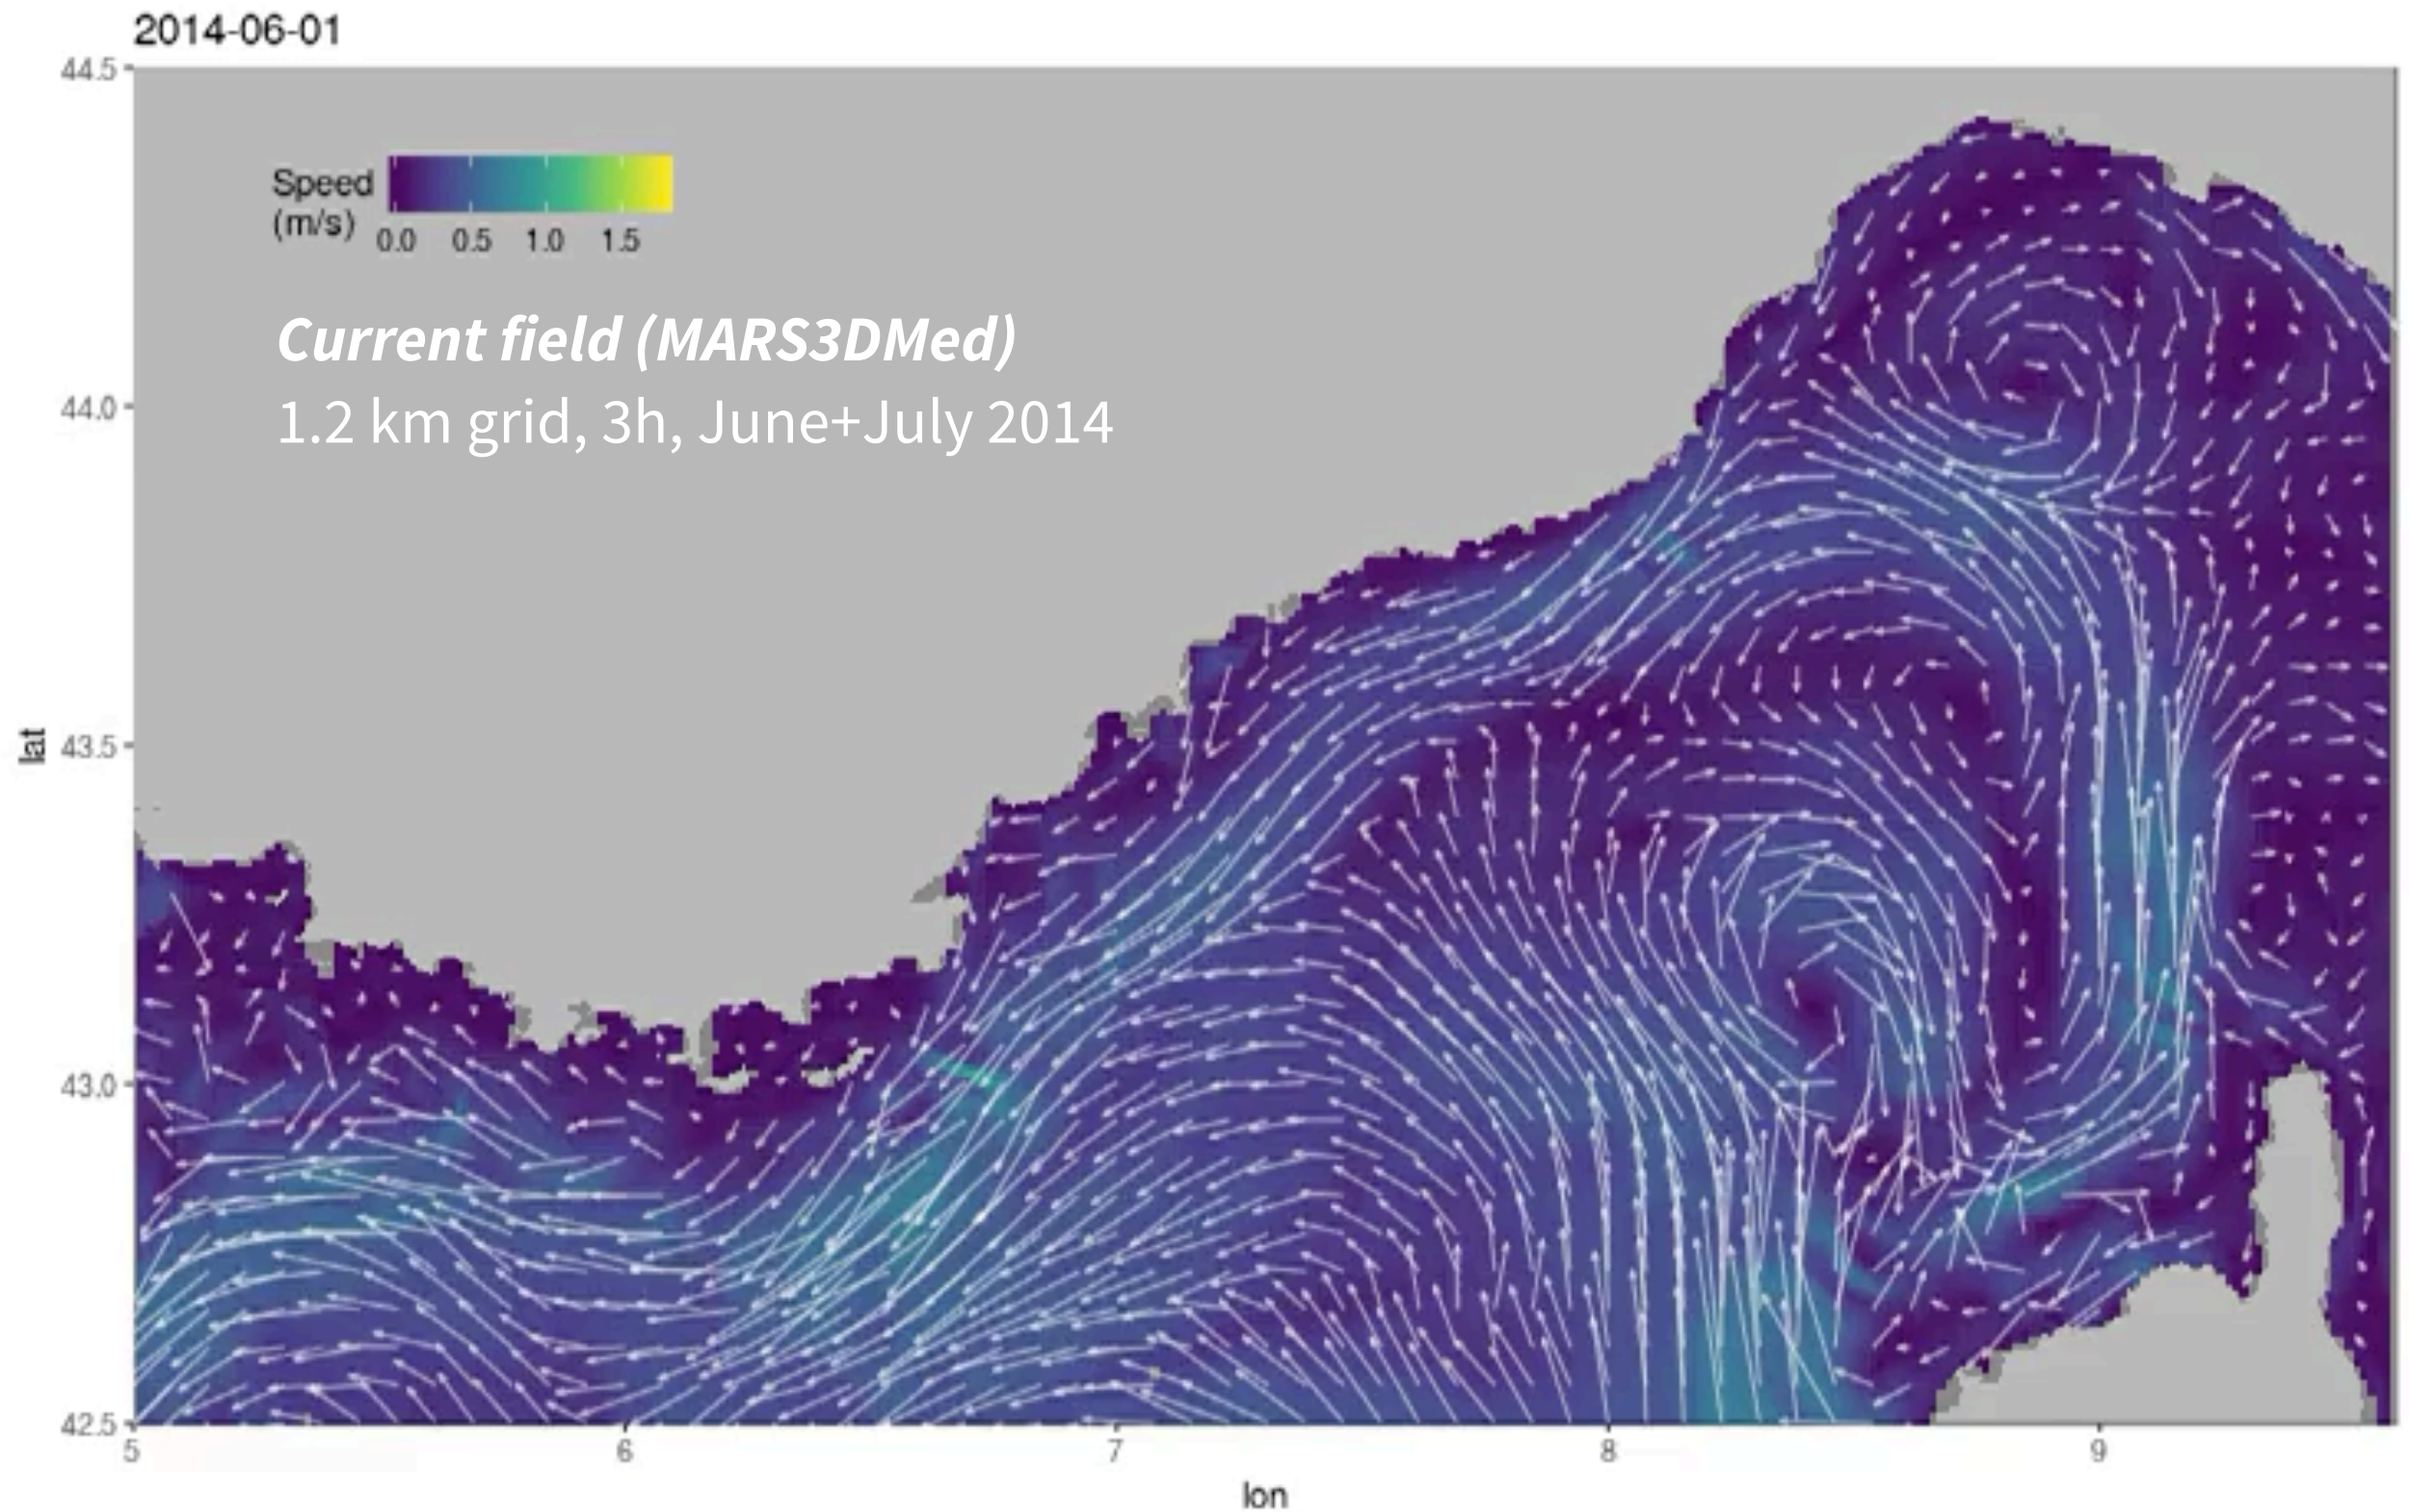

Yes, they swim fast

Fun comparisons!

Ecological consequences: model advection + swimming

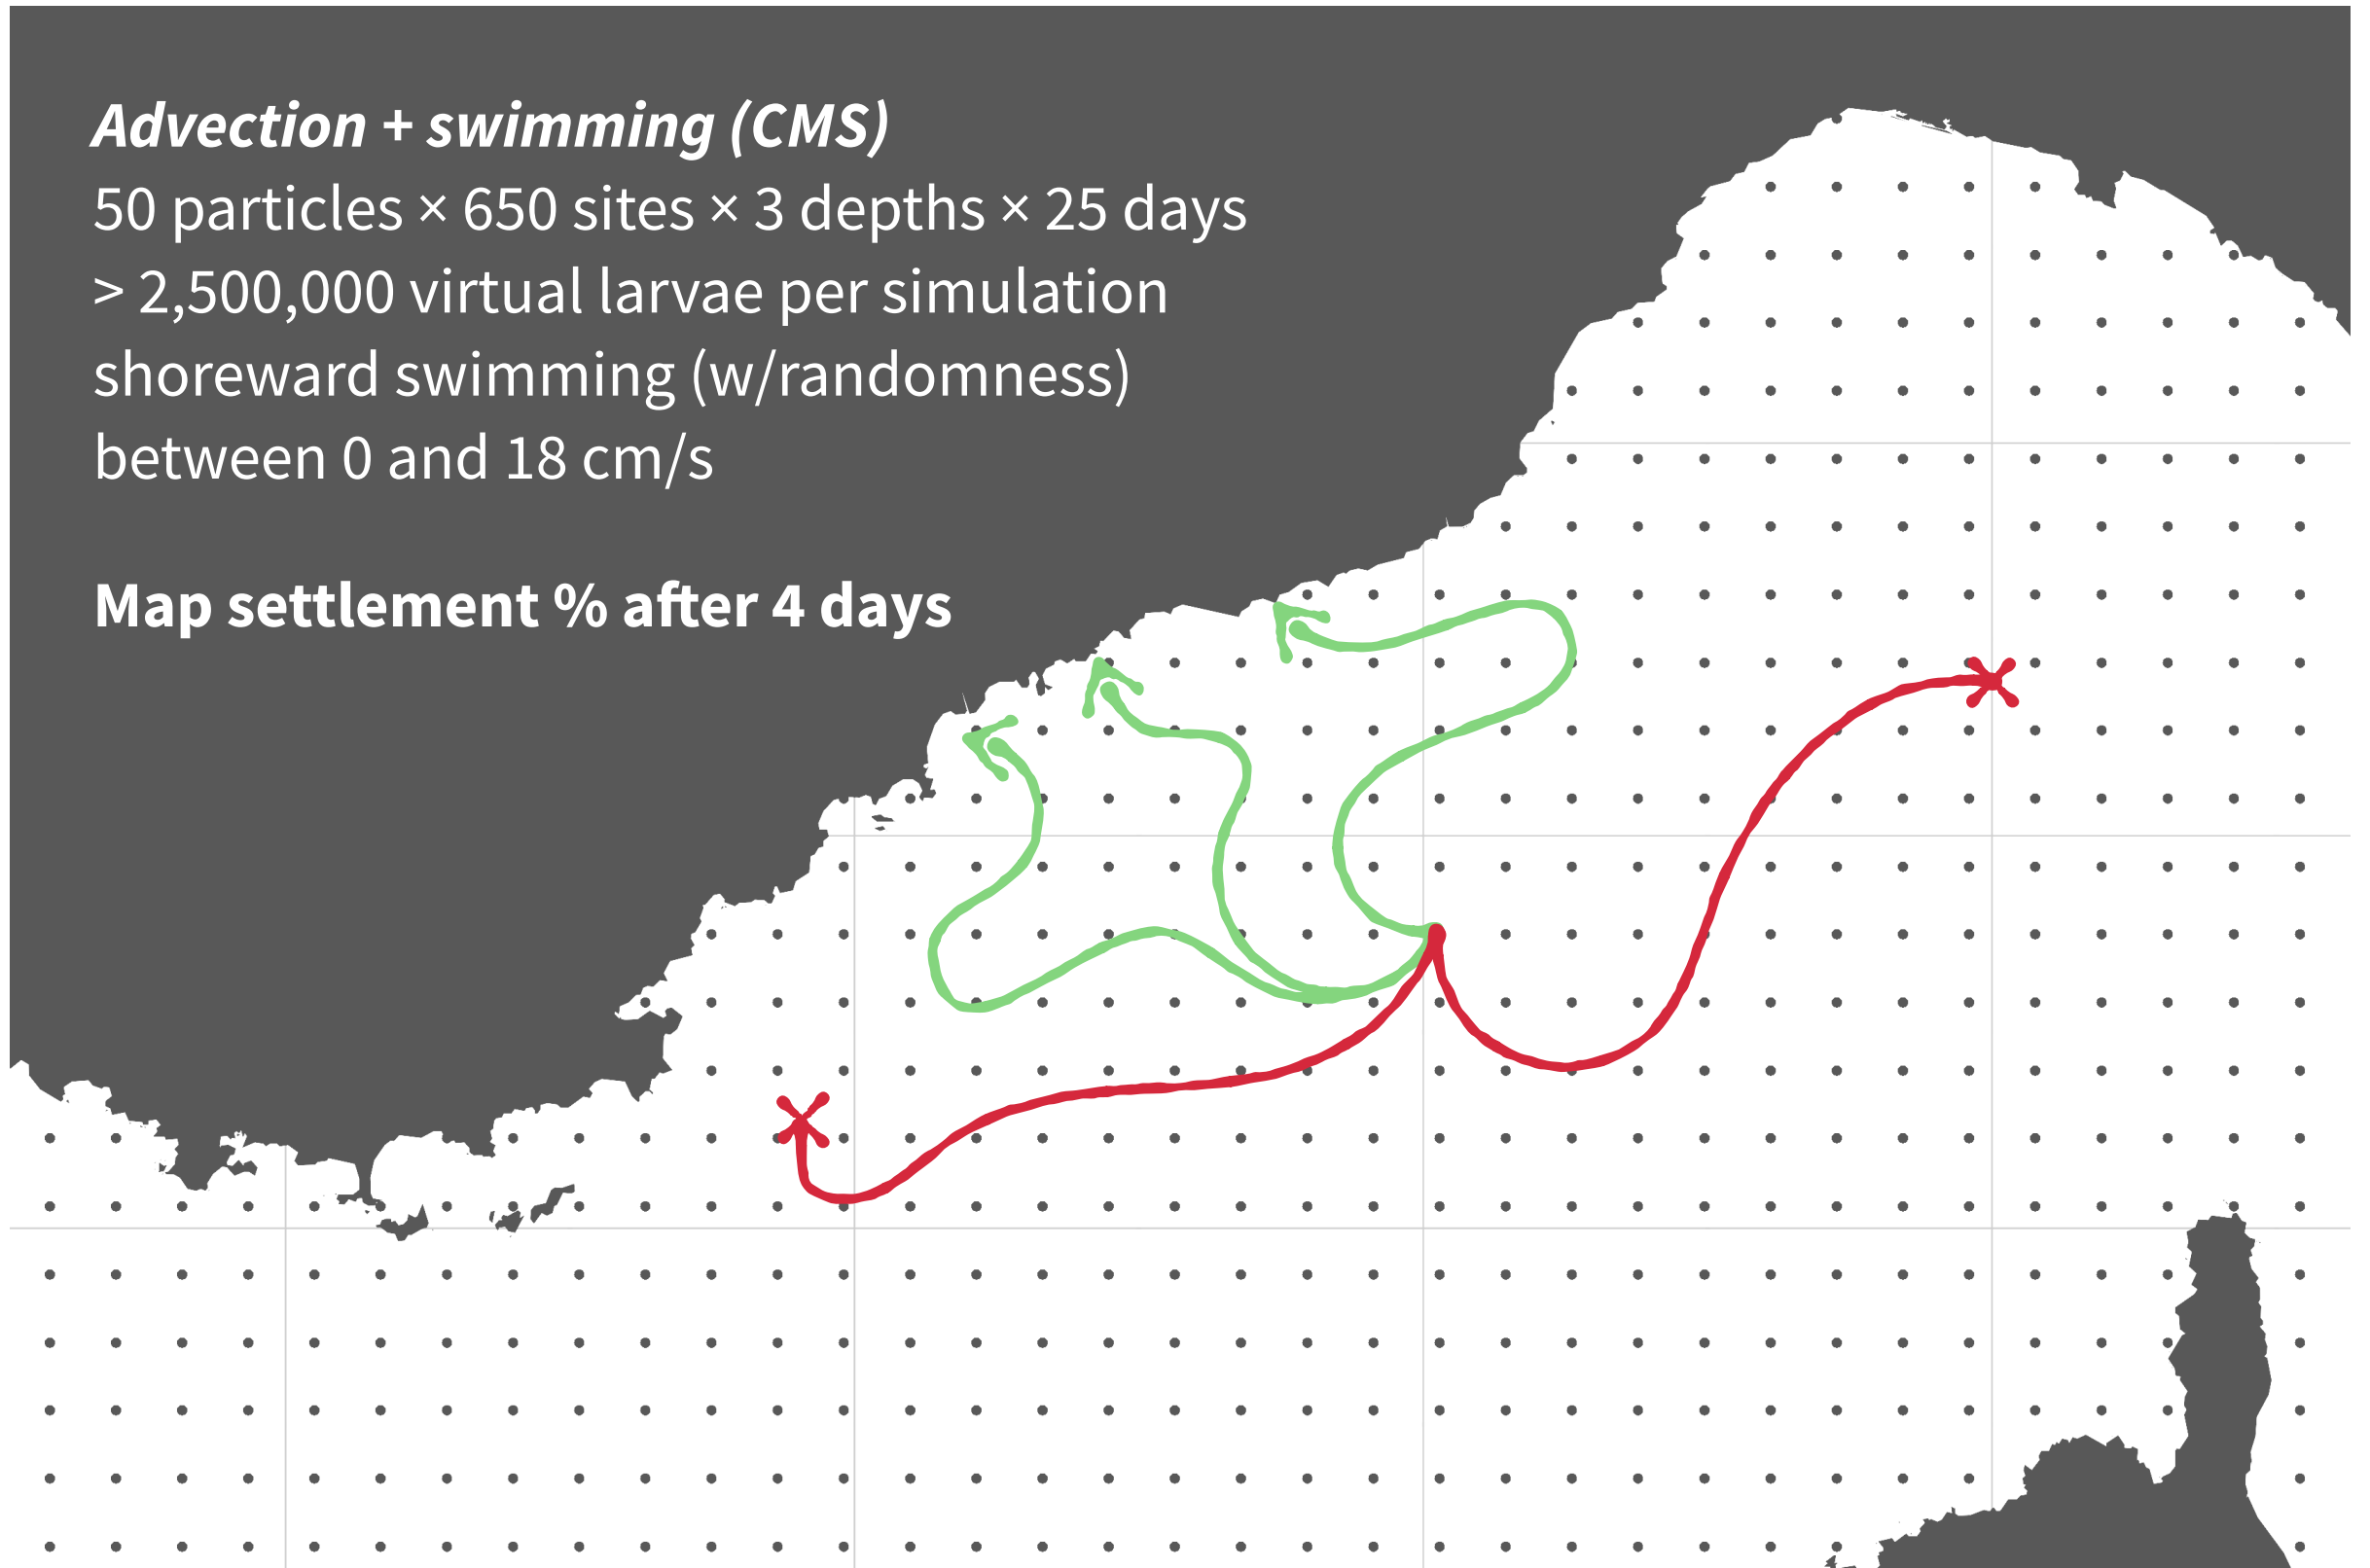

Config 1: Settlement phase

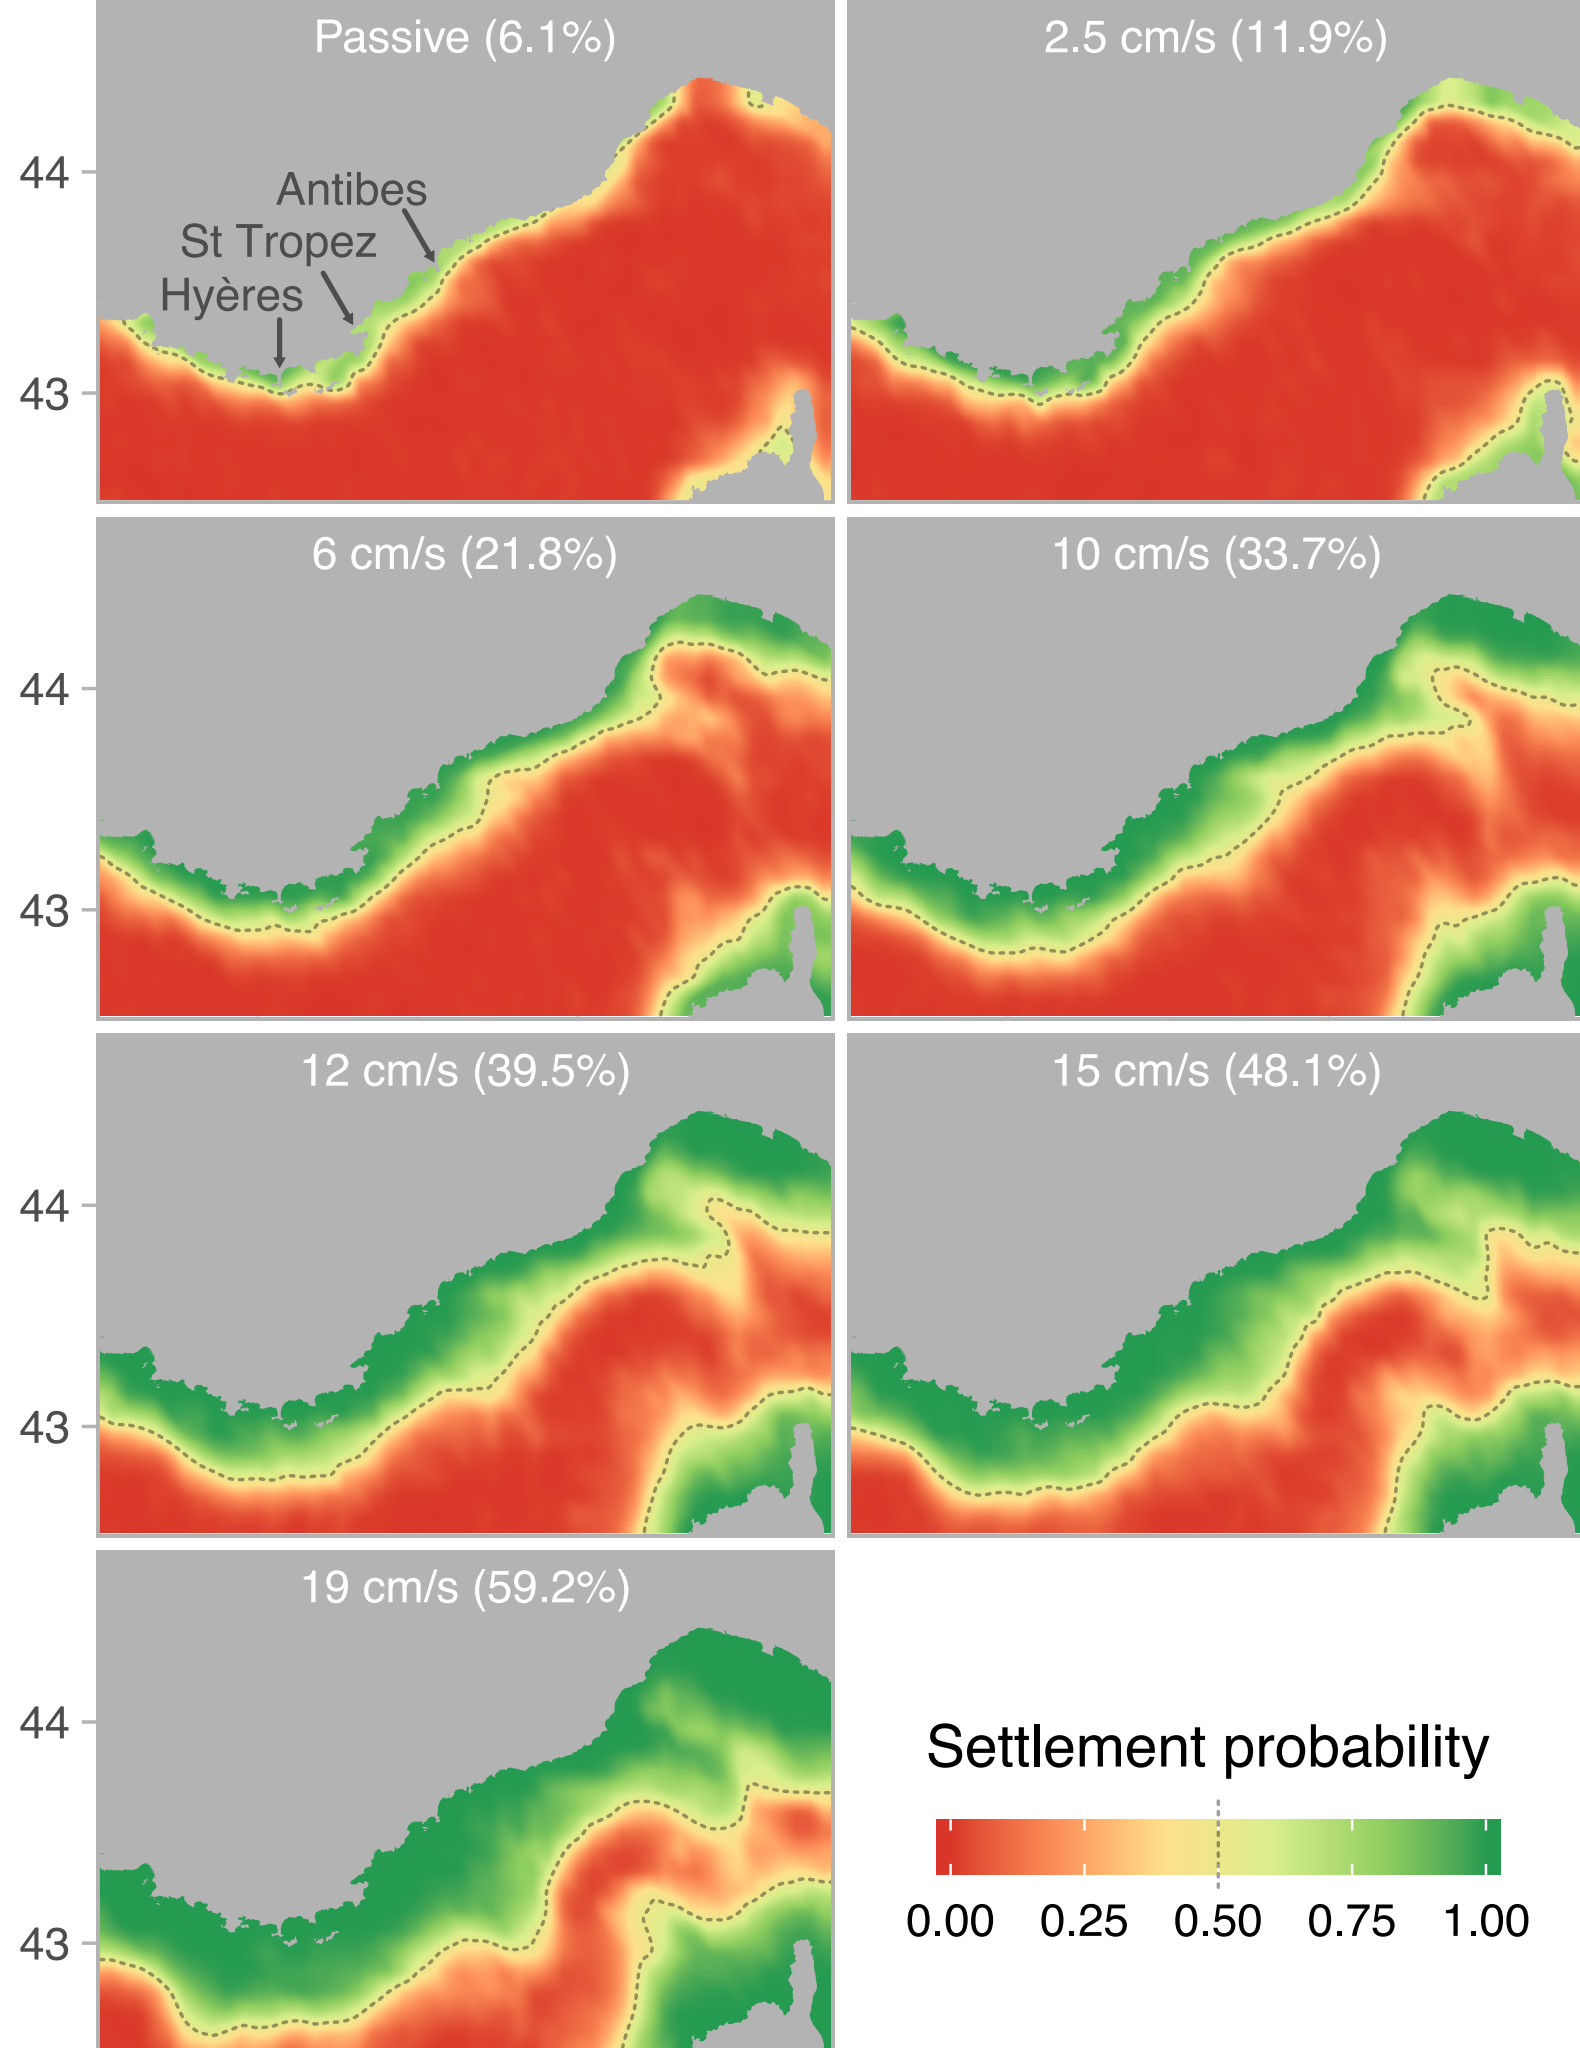

Advection + swimming (CMS)

50 particles × 650 sites × 3 depths × 25 days
> 2,500,000 virtual larvae per simulation
shoreward swimming (w/randomness)
between 0 and 18 cm/s

Map settlement % after 4 days

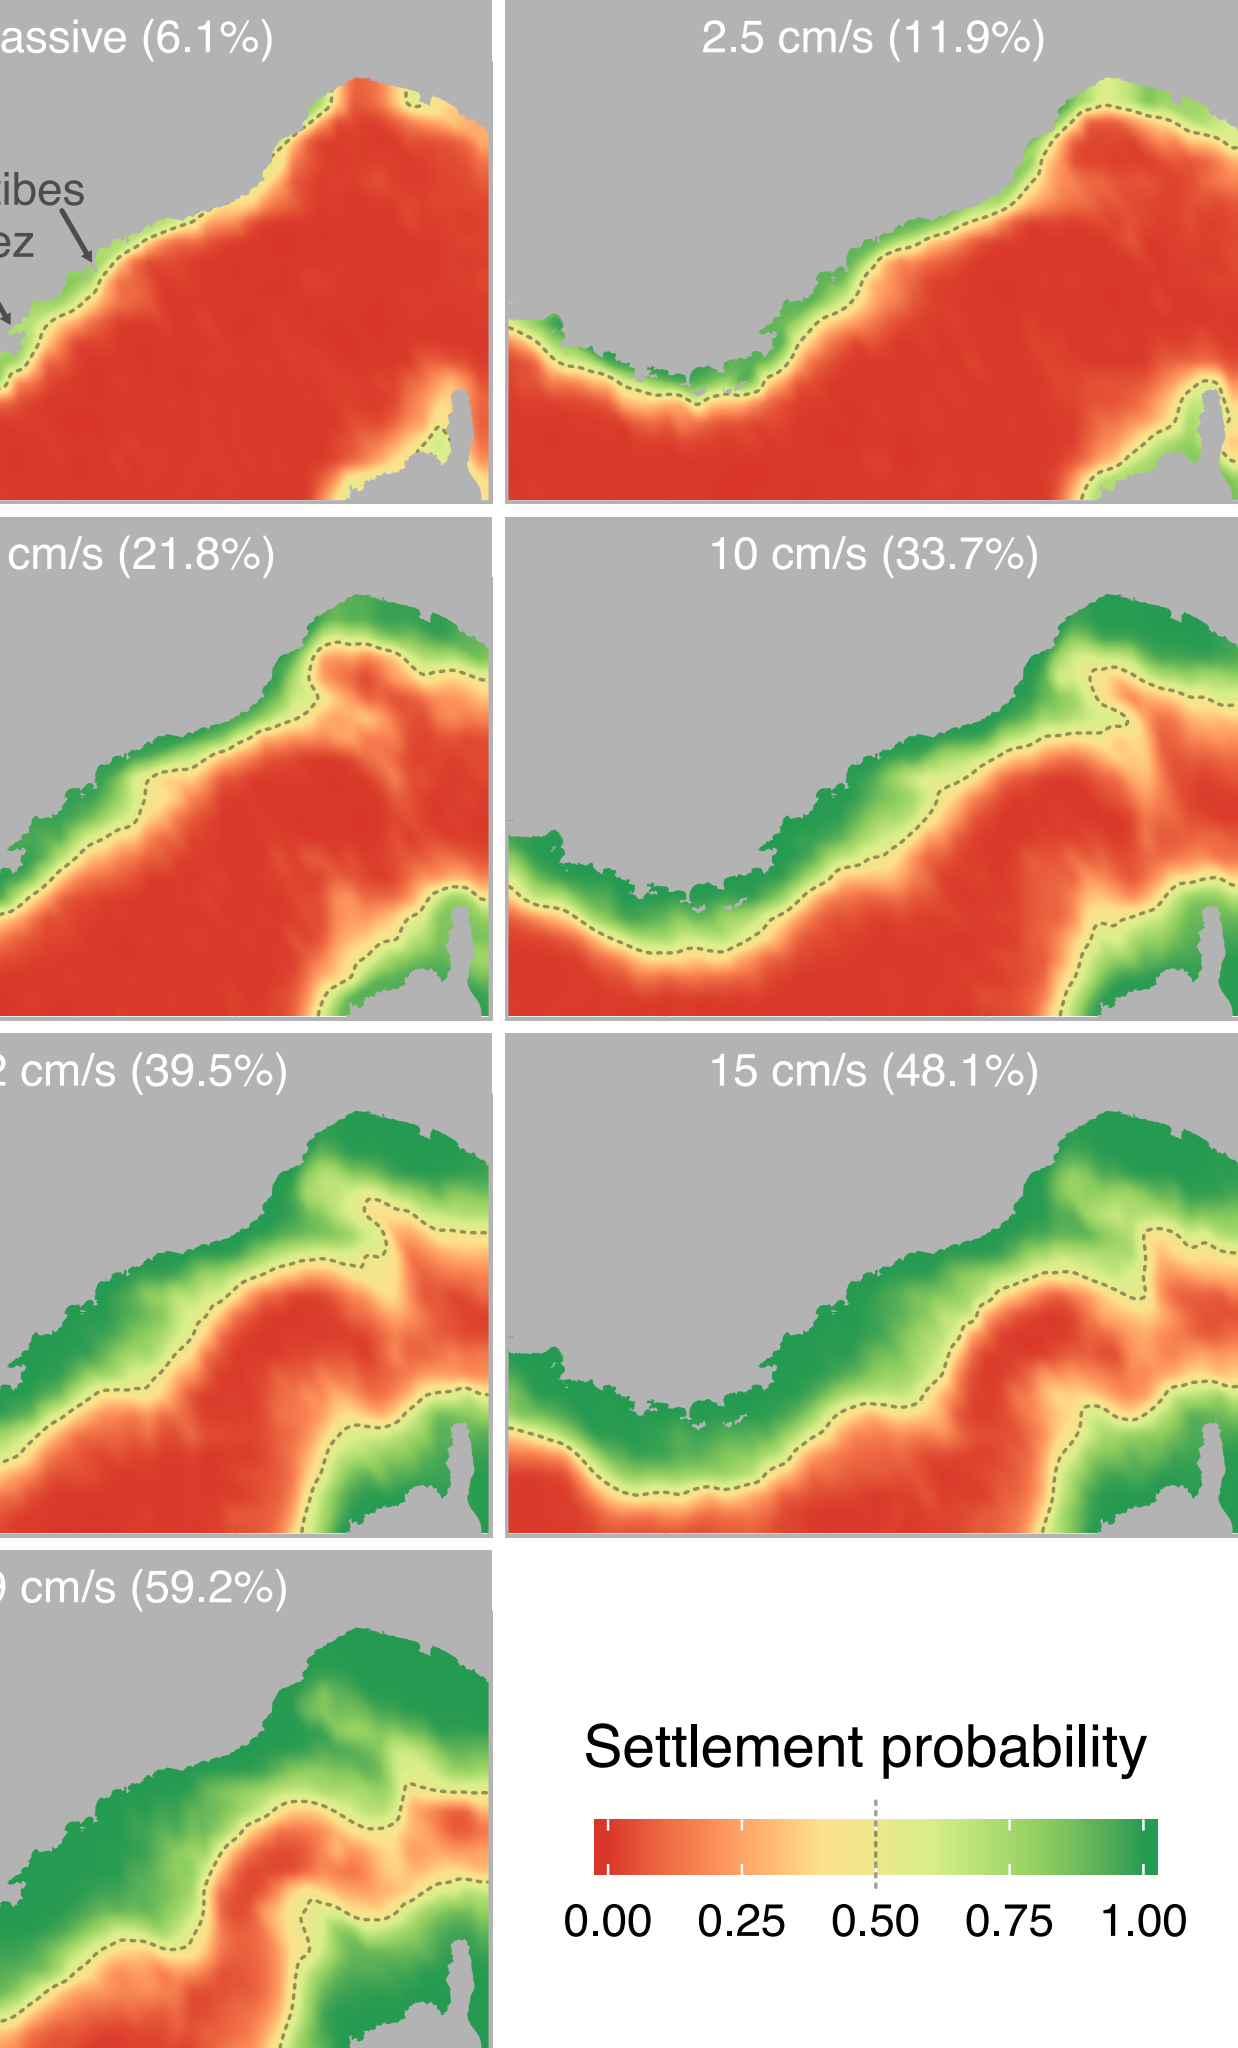

Settlement probability map

Settlement possible from
>20km away in only 4 days

Settlement **proportion** → ×10

15 cm/s (48.1%)

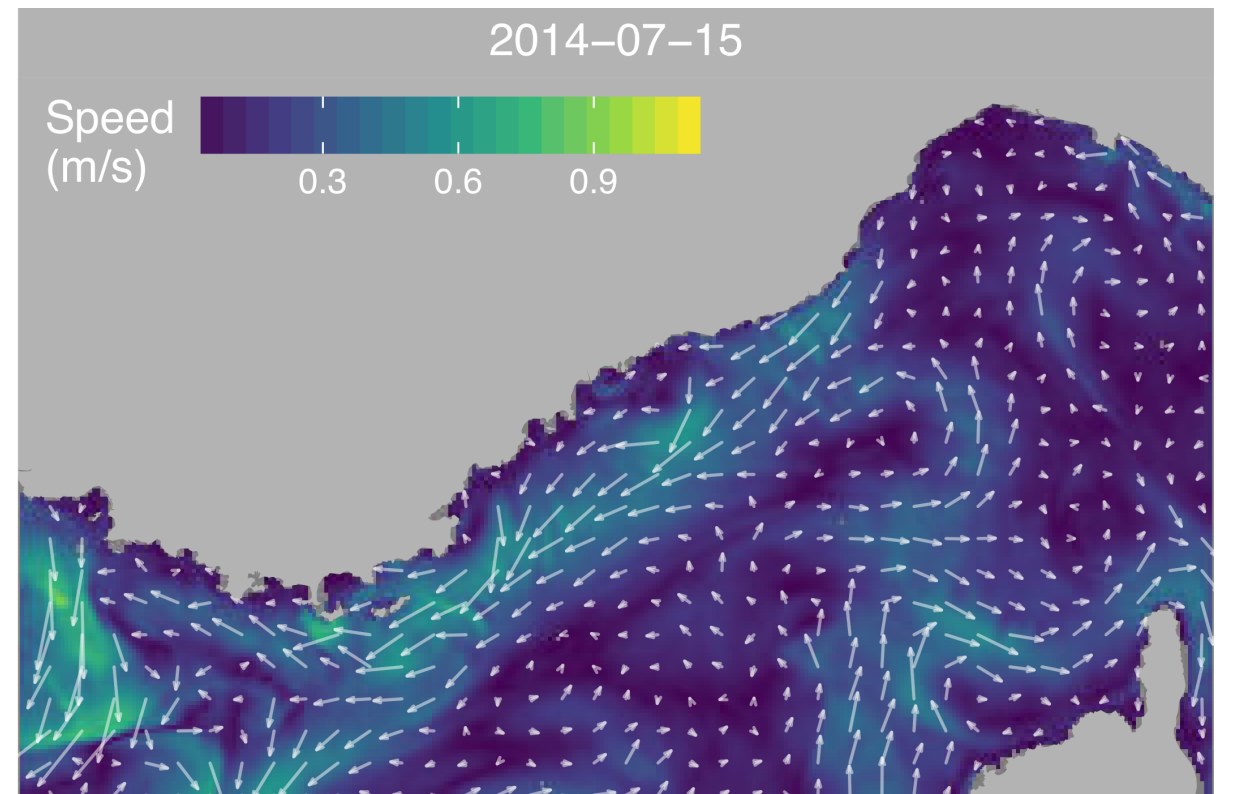

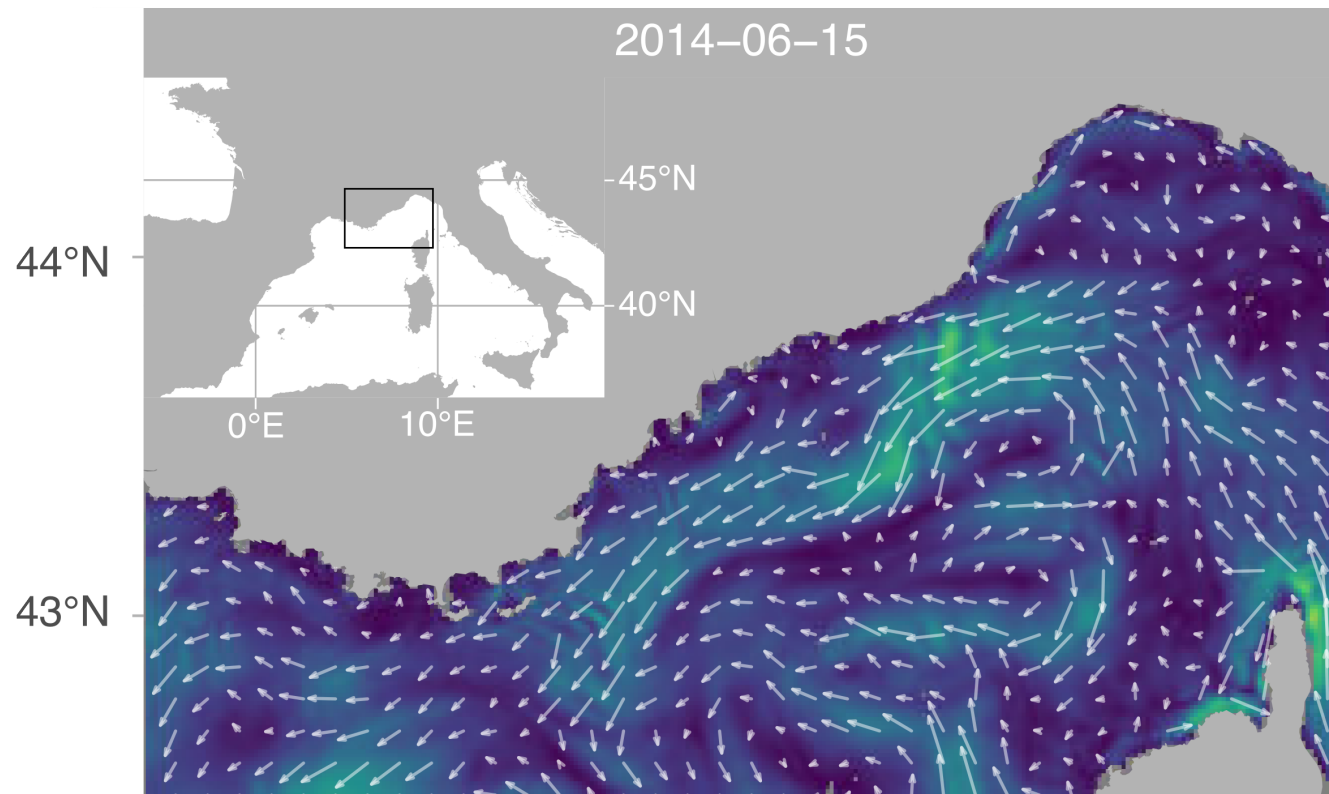

Settlement probability

0.00 0.25 0.50 0.75 1.00

Config 2: Connectivity among MPAs

1500 larvae/site, 2×/day

2 types of larvae (small and large Sparidae) with different larval duration, swimming abilities

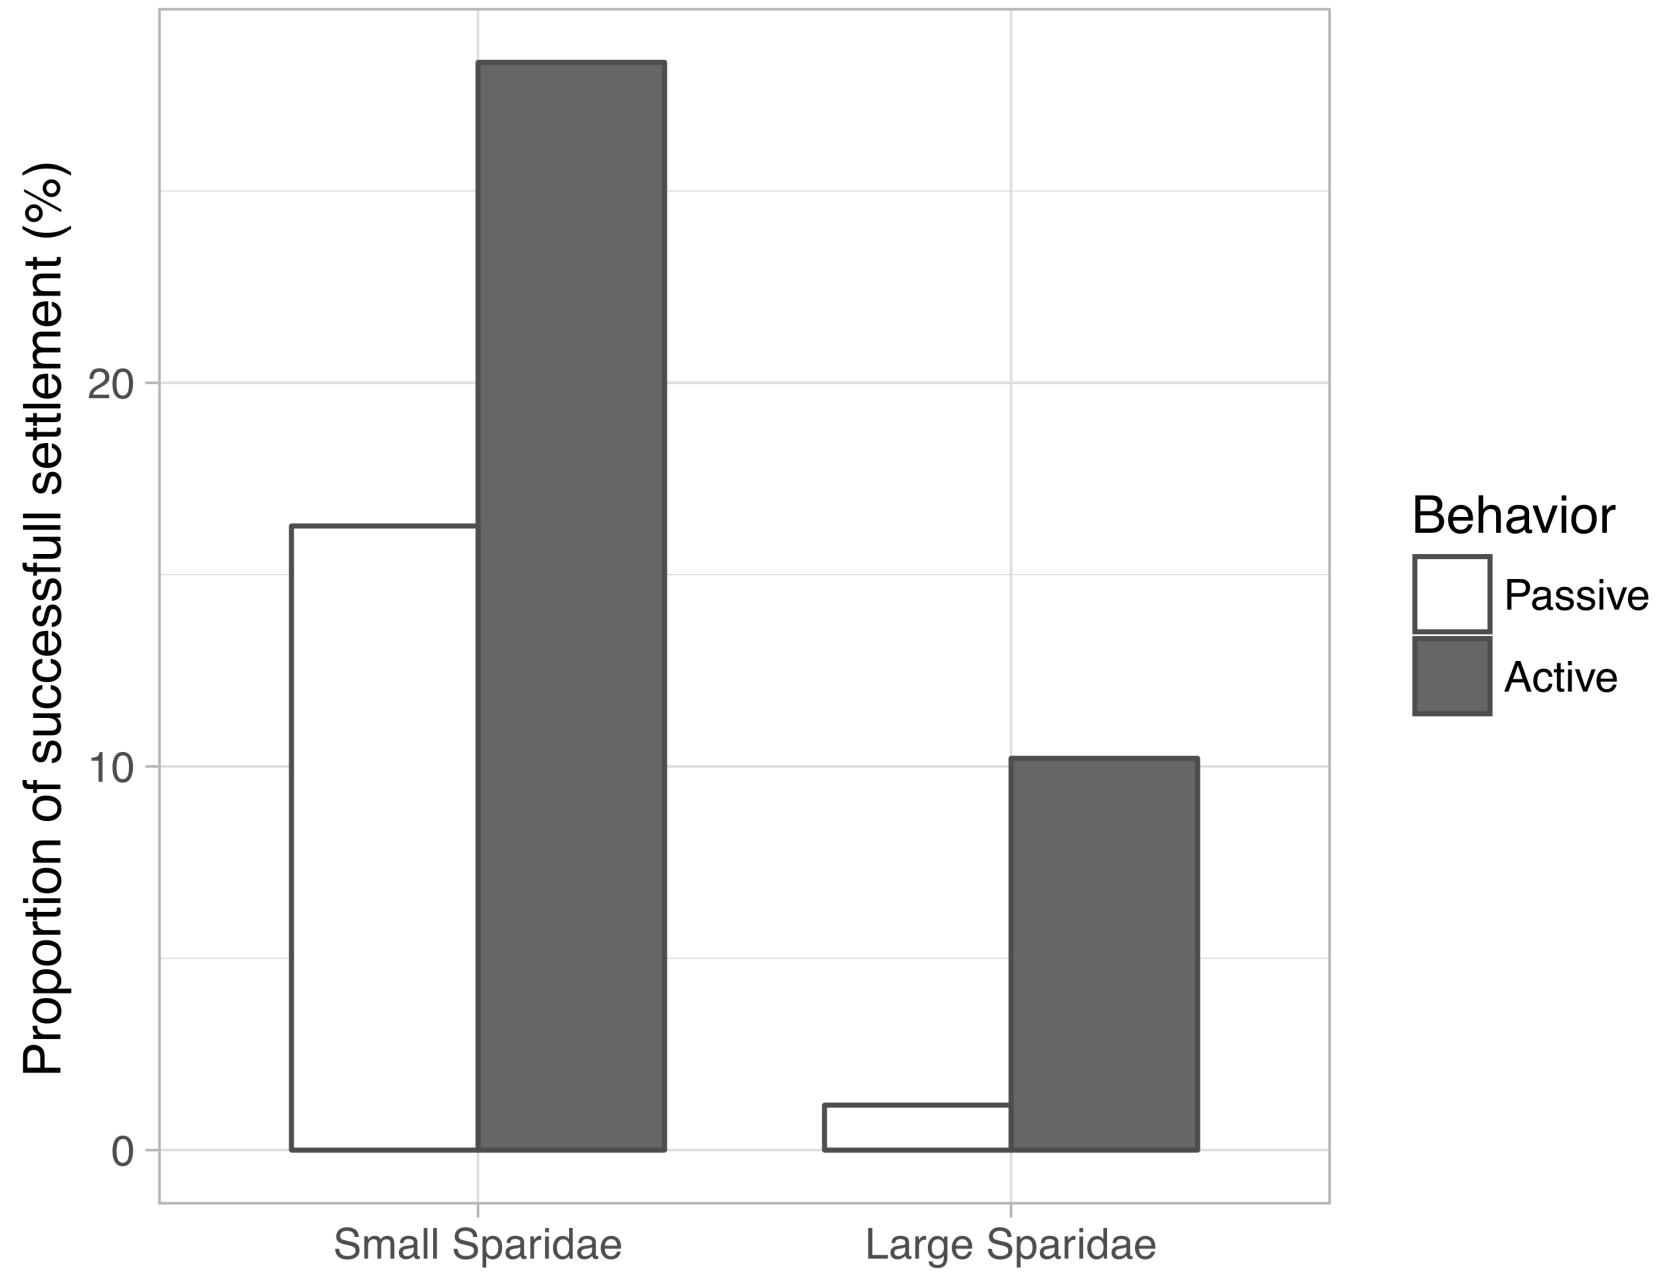

shoreward swimming (w/ randomness)

swimming speed increases with time

Increased settlement

Like before, swimming increases settlement

Connectivity scale

Retention:

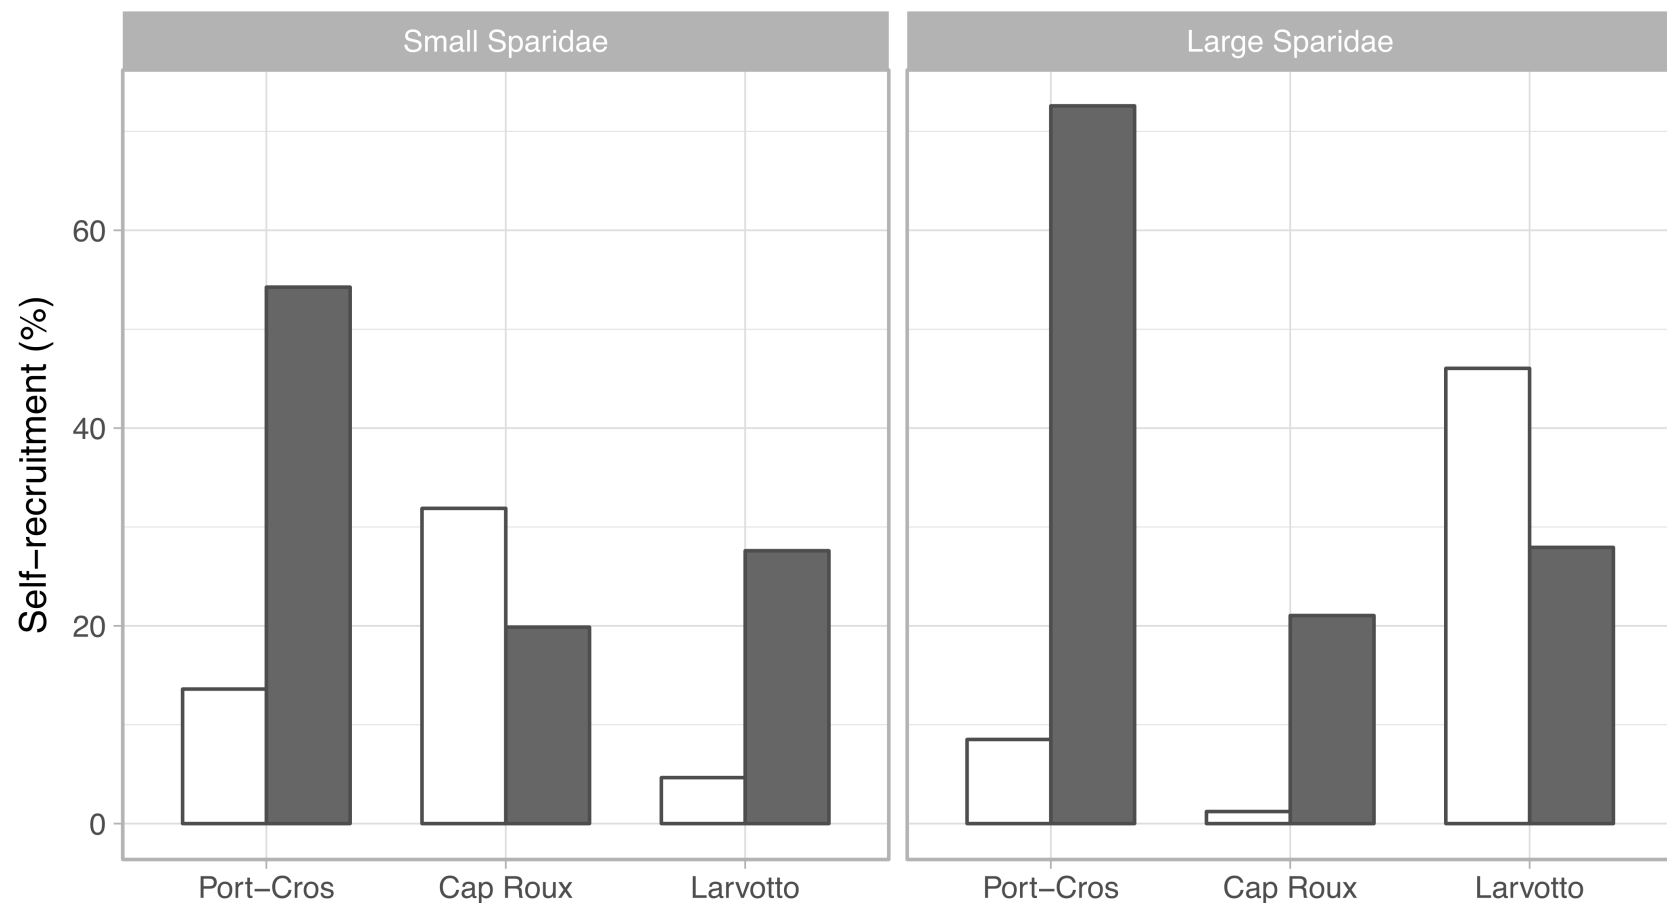

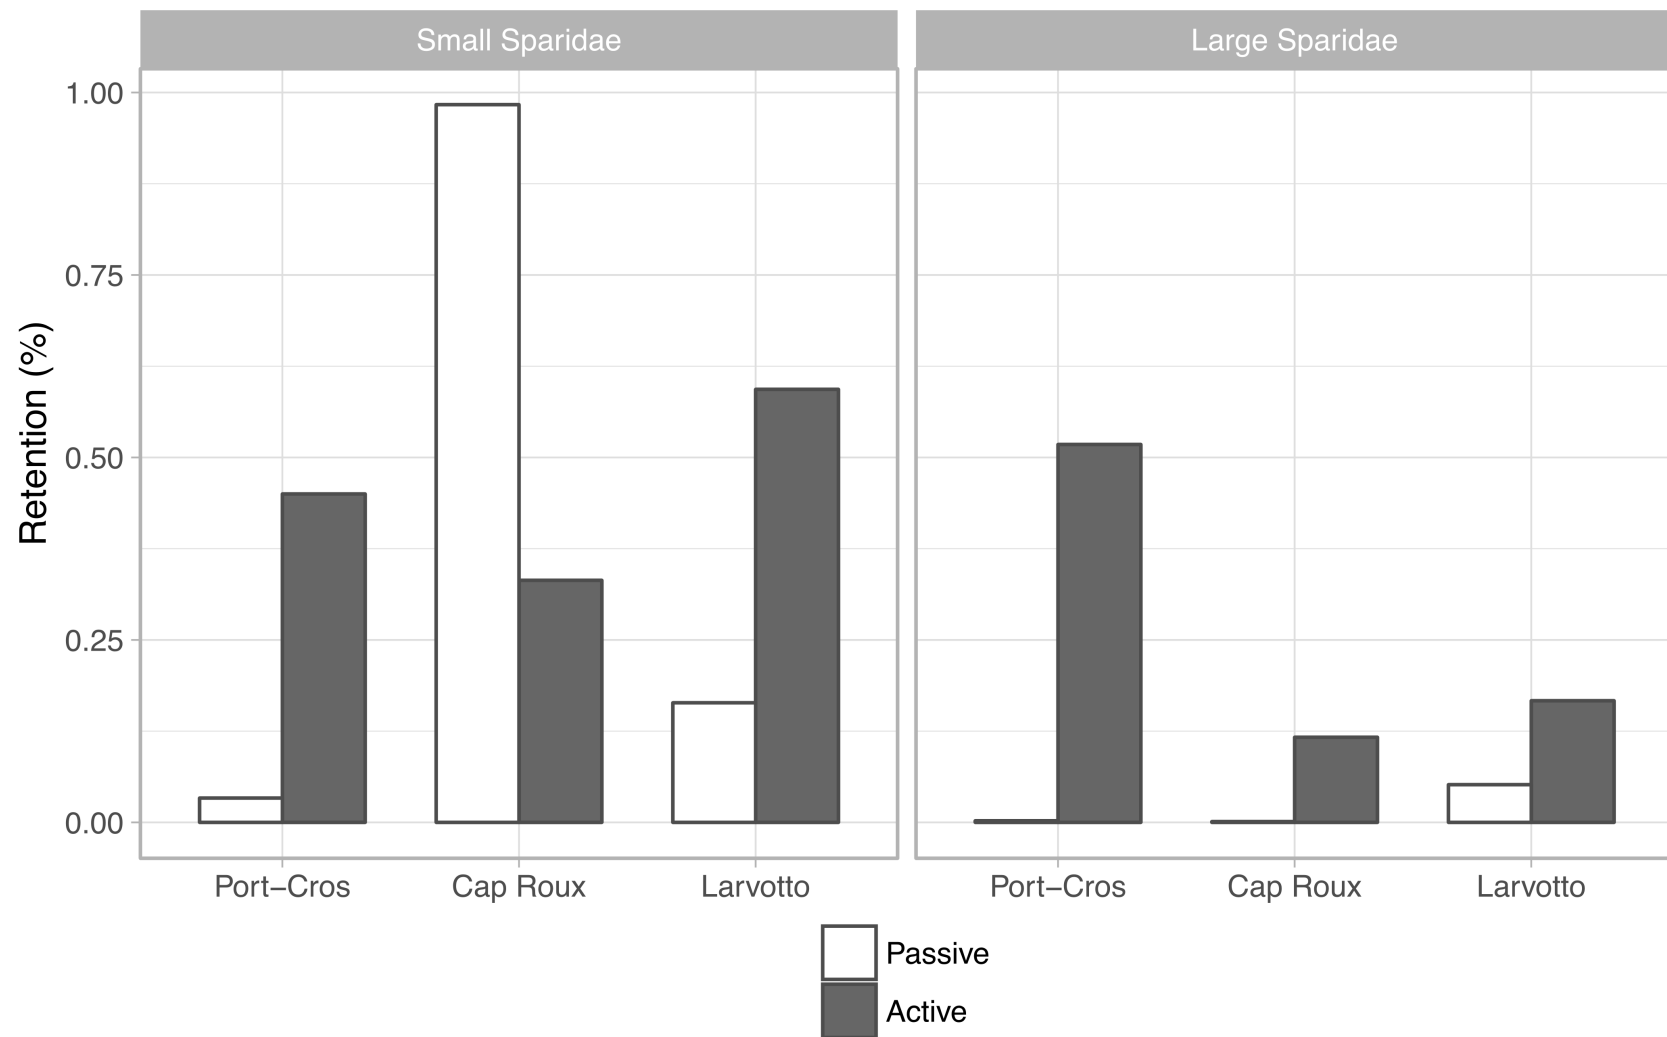

$$\frac{n_{from+to\ MPA}}{n_{from\ MPA}}$$

Self recruitment:

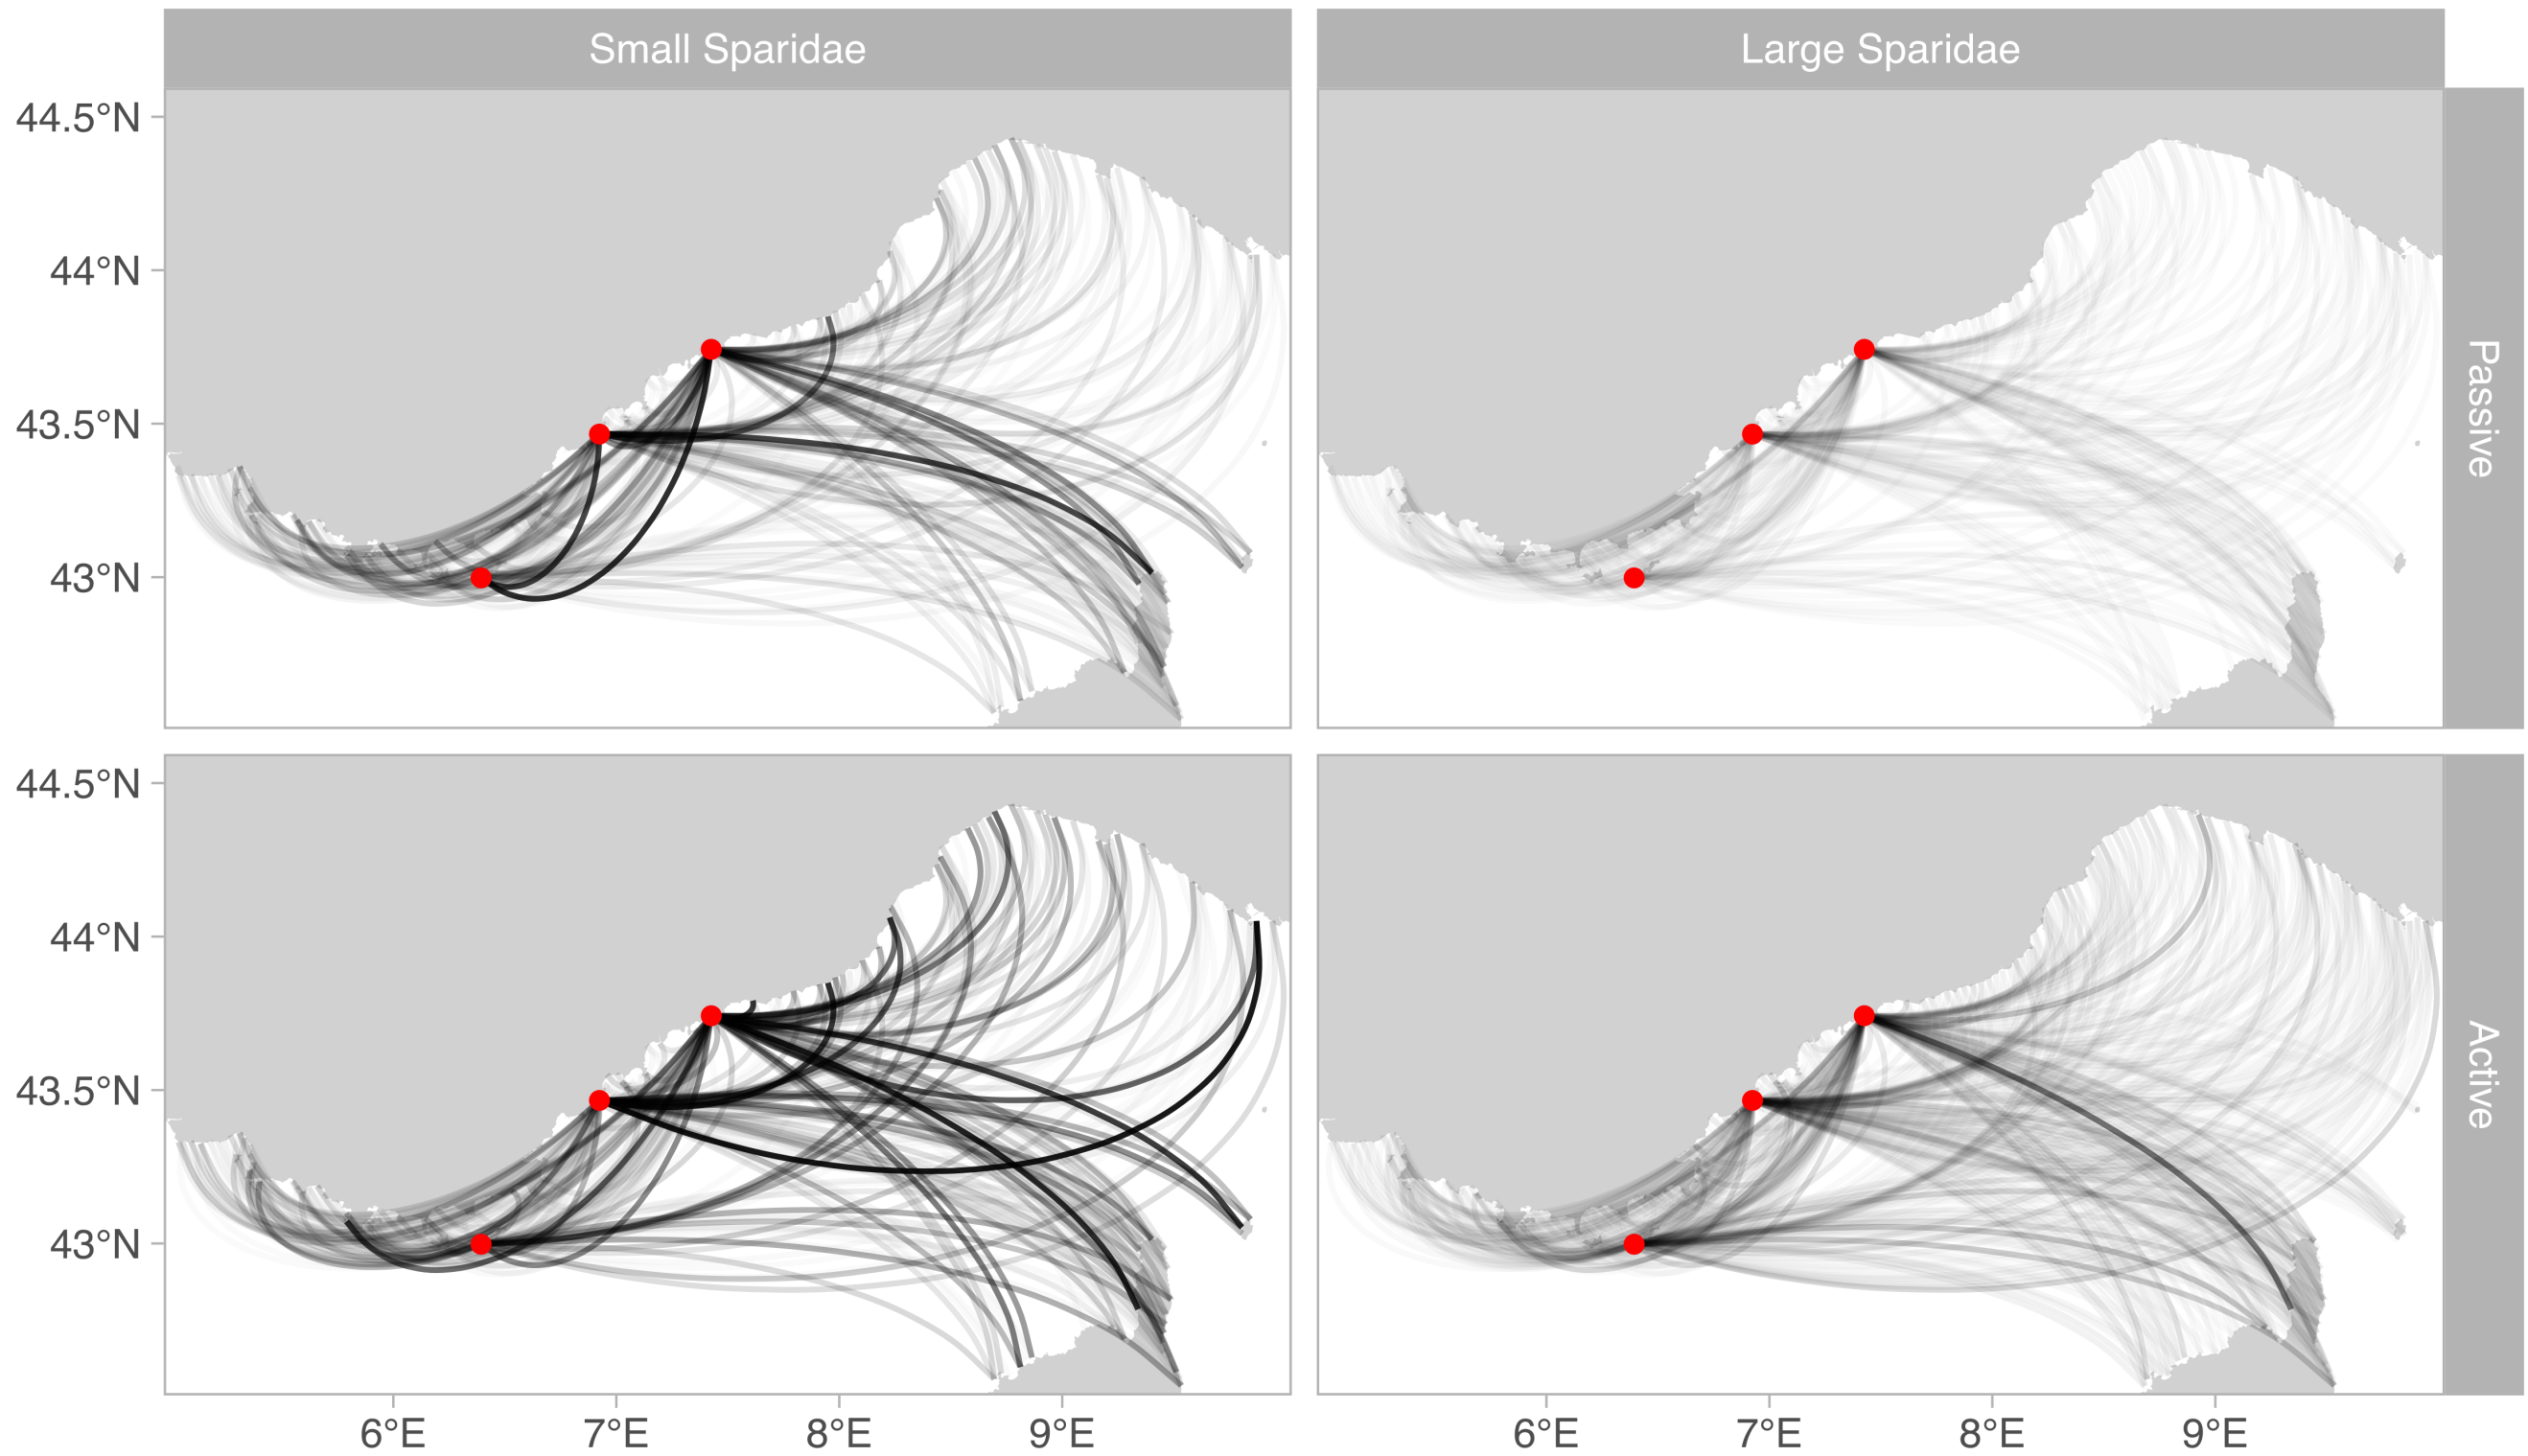

$$\frac{n_{from+to\ MPA}}{n_{to\ MPA}}$$

Swimming most often **increases retention**

Diminishes connectivity scales?

Dispersal pathways

FLUCTUATIONS IN THE GREAT FISHERIES OF NORTHERN EUROPE

It would be especially desirable to ascertain the extent of such movement, and **how far the young fry are able to return, of their own volition**, to such localities as offer favourable condition; for their further growth.

We ascertained, and the answer is: “from **very far**”!

Swimming

can strongly **increase settlement** rates

often **increases retention**, but also **spillover**

Merci
